Shriram Mantri Vidyanidhi Info Tech Academy PG DAC Data Structure Question Bank

Q1. Linked link are not s a) True		rs b) False			\ <u>-</u>	
Q2. Deleting a node in a a) True		e matter of us b) False	sing the delete	operator to f	free the node's memory	
	and shrink in size du uired for storing elem correct	_	2			
Q4. Which one of the fo a) Quick Sort	llowing algorithm is I b) Merge Sort		ple of Divide a oble Sort d) Bi	-	echnique	
Q5. The inorder traversa same tree produced the a) DBAECF	•		following is co			the
Q6. How many cycles sh a) 0		a tree? c) Any numb	er d) No	one of the abo	ove	
Q7. If graph G has no ed a) Unit matrix	ges then correspond b) Zero matrix	_	y matrix is trix with all 1's	d) N	None of the above	
Q8. What is not true for a) It is easier to p	orogram	essing?	b) It may incl d) All are true		llision	
Q9. Algorithms can be re a) PROGRAMS	epresented in various b) FLOWCHAI	•	c) DECISION	CHARTS	d) SPREADSHEET	
Q10. The element at the a) Largest c) Smallest		b) Depending d) None of th		ap it may be	smallest or largest	
Q11. The end at which a a) Front	new element gets a b) Rear	dded to quet c) Top	ue is called d) Bo	ttom		
Q12.Stack can be repres a) Arrays	ented using b) Arrays or linked lis	t	c) Only linked	d list	d) None of the above	
b) If it is not conne	d and there are no cy ected and there are o and there are cycles i	vcles in the greycles in the g	aph.			

Q14. Hashing refers to the process of deriving

b) Storage address from a record key

c١	Δ	floating-point	code	from	a	record	kev	
U)	Н	moating-point	coue	11 0111	a	record	ĸey	

d) None of the above

Q15. The inorder traversal of the same to preorder traversal sequence a) DBAECF	tree produced the sec	•	A. Which of the		correct
Q16. Which of the follo	owing is not an opera b) deque(Q,X)	· · · · · · · · · · · · · · · · · · ·	assuming that ue(Q,X)	queue has iten d) push(Q,X)	ns `Q` and `X`?
Q17. In an adjacency n a) Similar column		•	c) Not represe	entable	d) None of the above
Q18. A dynamic data s a) heap	tructure where we ca b) binary sear		esired records i c) circularly lii		e is d) array
Q19. We can efficientla a) linear queue	y reverse a string usir b) circular que	_	c) Stack	d) doubly link	ed list
four times and each el back on the stack. Nov	ement is inserted in a	queue. Then t	wo elements a	re deleted fron	rom A. The stack is popped n the queue and pushed
Q21. The memory add a. floor address	ress of the first eleme b. foundation address	=	is called address	d. base addre	SS
b. LOC(Array[5])=Base	Array)+w(5-lower bou (Array[5])+(5-lower b	und), where w ound), where v	is the number on the second is the number of the number of the number of the second is the second in the second in the second is the second in the second is the second in the second in the second is the second in	of words per m er of words per	emory cell for the array memory cell for the array memory cell for the array
Q23. Which of the folloa) linear arrays	owing data structures b) linked list		tructures? c) both of abo	ove	d) none of above
Q24. Which of the folloa) The list must be sort b) there should be the c)There must be mechd) none of above	ted direct access to the r	niddle elemen	t in any sublist	ch algorithm?	
Q25. Which of the folloa) must use a sorted a	-	on of binary se	earch algorithm	1?	

b) requirement of sorted array is expensive when a lot of insertion and deletions are needed

c) there must be a mechanism to access middle element directly

PG DAC Data Structure Question Bank

d) binary search algorithm is not efficient when the data elements are more than 1000.

Q26. Two dimensiona a) tables arrays	arrays are also called b) matrix arra		c) both of	above	d) none of above
Q27. A variable P is ca a) P contains the addr b) P points to the addr c) P can store only me d) P contain the DATA	ess of an element in I ress of first element in mory addresses	n DATA			
Q28. Which of the foll a) Arrays	owing data structure b) Records	can't store the	non-homog c) Pointers		ents? d) None
Q29. Before deleting a a) it is an list	nn element from list v b) it is not a ir			an empty list	d) it must be full.
Q30. Each data item ir indecomposable are c a) elementary items	-			o-items; those item calars	s which are d) all of above
a) An array is suitable b) In a record, there m	Q31. The difference between linear array and a record is a) An array is suitable for homogeneous data but the data items in a record may have different data type b) In a record, there may not be a natural ordering in opposed to linear array. c) A record form a hierarchical structure but a linear array does not d) All of above				
Q32. Which of the foll a) Arrays are dense lis b) data elements in lin c) pointers store the n d) linked lists are colle	ts and static data struked list need not be sext data element of a	ucture stored in adjece a list		•	
Q33. Binary search alg a) sorted linked list	orithm cannot be app b) sorted bina	<u>-</u>	c) sorted li	near array	d) pointer array
Q34. When new data a called a) underflow	are to be inserted into	o a data structu	re, but the	-	ace; this situation is usually d) saturated
Q35. The situation wh	en in a linked list STA b) overflow	RT=NULL is	c) housefu		d) saturated
Q36. Which of the foll a) FIFO lists	owing name does not b) LIFO list	t relate to stack c) Piles		Push-down lists	

Q37. Which of the following is two way list?

PG DAC Data Structure Question Bank

a`	grounded	header	list
u	Sibuliaca	IICUUCI	

b) circular header list

c) linked list with header and trailer nodes

d) none of above

· · · · · · · · · · · · · · · · · · ·		-,		
Q38. The term "push a) array	" and "pop" is related b) lists	to the c) stacks	d) all of above	
Q39. A data structure a) Linked lists	e where elements can b) Stacks	be added or removed c) Queues	d at either end but not in d) Deque	the middle
Q40. When inorder to a) FAEKCDBHG	raversing a tree resulto b) FAEKCDHG		the preorder traversal w FKHDCBG d) FEAI	ould return KDCHBG
Q41. Which data stru a) Stacks	ucture allows deleting of b) Queues	data elements from f c) Deques	ront and inserting at read d) Binary search tree	r?
Q42. Identify the dat a) Input-restricted		ws deletions at both exput-restricted deque	ends of the list but insert c) Priority que	·
Q43. Which of the fo a) Strings	llowing data structure b) Lists c) Stac		one of above	
Q44. Which of the fo a) Strings	llowing data structure b) Lists	is linear type? c) Queues	d) All of above	
Q45. To represent hid a) Deque	erarchical relationship b) Priority	between elements, v c) Tree	which data structure is su d) All of above	uitable?
Q46. A binary tree will a) Complete bina	hose every node has e ry tree b) Binary s			d) None of above
Q47. The depth of a c a) Dn = n log2n	complete binary tree is b) Dn = n log2		n = log2n d) Dn =	log2n+1
a) the variable in Eb) the operationsc) the variables an	ting any algebraic expose E will appear as externa- in E will appear as extend and operations in E will a and operations in E will a	al nodes and operation ernal nodes and varia appear only in interna	bles in internal nodes al nodes	a 2-tree,
O49. A binary tree ca	n easily be converted	into a 2-tree		

- - a) by replacing each empty sub tree by a new internal node
 - b) by inserting an internal nodes for non-empty node
 - c) by inserting an external nodes for non-empty node
 - d) by replacing each empty sub tree by a new external node
- Q50. When converting binary tree into extended binary tree, all the original nodes in binary tree are
 - a) internal nodes on extended tree

b) external nodes on extended tree

PG DAC Data Structure Question Bank

c) vanished on extended tree

d) None of above

Q51. The post order tra a) ABFCDE	aversal of a binary tree is b) ADBFEC	DEBFCA. Find out tl c) ABDECF	ne pre order trav d) ABDCE		
Q52. Which of the follo a) Bubble sort	owing sorting algorithm is b) Insertion sort	of divide-and-conq c) Quick	• • •	All of above	
Q53. An algorithm that a) Sub algorithm	calls itself directly or indi b) Recursion	rectly is known as c) Polish notation	on d)	Traversal algorithm	
efficiency. These specia	•			nt to nodes higher in the tre	e for
Q55. The in order trave a) Binary trees	ersal of tree will yield a so b) Binary se	_	ents of tree in c) Heaps	d) None of above	
_ ·			maller than right	sub tree	
Q57. In a graph if e=[u a) endpoints of e	, v], Then u and v are calle b) adjacent		c) neighbors	d) all of above	
Q58. A connected grap a) a tree graph	h T without any cycles is o b) free tree		d)	All of above	
Q59. In a graph if e=(u, a) u is adjacent to v c) u is processor and	but v is not adjacent to u		b) e begins at u a d) both b and c	nd ends at v	
Q60. If every node u in a) isolated	G is adjacent to every oth b)complete	ner node v in G, A g c) finite	=	e y connected	
Q61. Two main measur a) Processor and memo	res for the efficiency of an ory b) Complex	algorithm are ity and capacity	c) Time and sp	ace d) Data and spa	эсе
Q62. The time factor wa) Counting microsecond) Counting the number		b) Counting the	is measured by number of key o kilobytes of algo	-	
Q63. The space factor v	when determining the eff	iciency of algorithm	is measured by		

- - a) Counting the maximum memory needed by the algorithm
 - b) Counting the minimum memory needed by the algorithm

PG DAC Data Structure Question Bank

c) Counting the average memory needed by the algorithm

Q76. Finding the location of the element with a given value is

d) Counting the maximum disk space needed by the algorithm

Q64. Which of the f a) Best case	ollowing case does no b) Worst cas		=	ıll case
a) Item is someb) Item is not irc) Item is the la	e occur in linear search where in the middle on the array at all st element in the array ast element in the array	f the array		
a) When Item isb) When Item isc) When Item is	ase occur in linear sead s somewhere in the mi s not in the array at all s the last element in th s the last element in th	iddle of the array	e at all	
a) Much mo b) Much mo		yze than that of wors han that of worst cas		rst case
Q68. The complexit a) O(n)	y of linear search algo b) O(log n)	rithm is c) O(n2)	d) O(n log n)	
Q69. The complexit a) O(n)	y of Binary search algo b) O(log)	orithm is c) O(n2)	d) O(n log n)	
Q70. The complexit a) O(n)	y of Bubble sort algori	thm is c) O(n2)	d) O(n log n)	
Q71. The complexit	y of merge sort algorit b) O(log n)	hm is c) O(n2)	d) O(n log n)	
Q72. The indirect ch a) internal char	_	a variable in one mod ter-module change	dule by another module c) side effect	is called d) side-module update
Q73. Which of the f a) Arrays	ollowing data structur b) Linked lists	e is not linear data st c) Both of above	ructure? d) None of a	bove
Q74. Which of the a	following data structu b) Graphs	re is linear data struct c) Arrays	cure? d) None of above	
Q75. The operation a) Sorting	of processing each ele b) Merging	ement in the list is kno c) Inserting		

PG DAC Data Structure Question Bank

a) Traversal

b) Search

c) Sort

d) None of above

Q77. Arrays are best data structures

- a) for relatively permanent collections of data
- b) for the size of the structure and the data in the structure are constantly changing
- c) for both of above situation
- d) for none of above situation

Q78. Linked lists are best suited

- a) for relatively permanent collections of data
- b) for the size of the structure and the data in the structure are constantly changing
- c) for both of above situation
- d) for none of above situation

Q80. Each array declaration need not give, implicitly or explicitly, the information about

a) the name of array

b) the data type of array

c) the first data from the set to be stored

d) the index set of the array

- Q81. The elements of an array are stored successively in memory cells because
 - a) by this way computer can keep track only the address of the first element and the addresses of other elements can be calculated
 - b) the architecture of computer memory does not allow arrays to store other than serially
 - c) both of above
 - d) none of above

Q82. When is a linear queue said to be empty?

a) front > rear

b) front = -1

c) front > rear + 1

d) rear = = front + 1

Q83. Which of the following statement is true regarding stacks and queue?

- i) In sequential representation, stack is logically as well as physically full
- ii) Linear queue result in memory wastage as reuse of memory is not allowed.
- iii) A Queue-full condition for a circular queue is 'rear=front + 1'

a) i & ii

b) i & iii

c) ii & iii

d) All.

Q84. Queue-full condition for the circular queue represented sequentially is?

a) front = = rear

b) rear + 1 + front

c) (rear+1)%arraysize = = front

d) None of the these

Q85. In a linked representation a node consists of which of the following fields?

a) Data, link, header

b) Only link field

c) Only data field

d) Data and link fields.

Q86. In case of a linked list

a) Arrays are used to hold the list

b) Every linked node has a link to the next node

c) Links have a array of pointer to the next link.

d) All of the above

Q87. The link field of last node, in a singly link list representation is linked with

a) The data field of the first node

b) The link field of the first node

c) A null

d) The link field of the prior node

Q88. Which of the following is not true regarding a singly linked list?

PG DAC Data Structure Question Bank

a) Nodes are linked in one direction

const int a=124;

- b) The last node is pointing to NULL indicating the end of list
- c) Searching for a node always starts at the first node and traverses through every subsequent nodes
- d) Address of the list is the address of the node

a) Int	eader of main function v main(int argc, char *arg main(int argc, char *arg	v)		e ar *argv, int argc) ar *argv[],int argc)
Q90. Using a) va			from variable number of a ra_show d) va_s	
Q91. what which which was a second to the contract of the cont	will be the output of the tdio.h>	following program?		
prin retu	t arr[]={12.5,5.4,7.3,21.6 tf("%d\n",sizeof(arr)/siz ırn 0;	·		
} a) 4	b) 5	c) 8	d) 20	
Int main() { Int j	is the output of the follow, sum; j=1, sum=0; j<5; j++) sum+=j; sum=j; cout< <sum; 0;<="" return="" td=""><td></td><td>tion error: undefined varia</td><td>able sum and j d) 6</td></sum;>		tion error: undefined varia	able sum and j d) 6
the frequer a) An arra		50. What would be t b) A	to 100] representing the s the best way for P to store An array of 100 numbers A dynamically allocated arr	•
a) A refe b) A refe c) Refere d) All of Q95. Dynar	n is true about reference rence can never be null rence once established of ence doesn't need an exp the above. mic objects are stored in e segment	cannot be changed	mechanism. c) Heap	d) Run time stack
Q96. What	is the output of the follo	wing code?		

PG DAC Data Structure Question Bank

```
void main()
       const int* Sample();
       int *p;
       p=Sample();
       cout<<*p;
}
const int* Sample()
       return (&a);
}
                                                           c) output: 124
                             b) compilation error
                                                                                 d) garbage value
       a) Warning
Q97. What is the size of pointer in C++ on 32 bit architecture?
               b) 2
                      c) 4
                             d) It depends on size of the datatype of a variable to which pointer is pointing to
     a) 1
Q98. Which are the main three features of OOP language?
     a) Data Encapsulation, Inheritance and Exception handling
     b) Inheritance, polymorphism and exception handling
     c) Data encapsulation, inheritance and polymorphism
     d) Overloading, inheritance and polymorphism
Q99. Which out of the given function types cannot be declared "virtual"?
   a) Normal member functions
                                            b) Constructor
                                                                   c) Destructor
                                                                                         d) None of the above
Q100. Read the code carefully
class Base
{
                             int I;
       private:
                             int j;
       protected:
       public:
                      int k;
};
class Derived:public Base
{
       private:
                             int x;
       protected:
                             int y;
       public:
                      int z;
};
sizeof(Base)= _____ bytes , sizeof(Derived) _____ bytes on a 32 bit architecture.
                      b) 12, 16
                                                                  d) 4, 16
    a)12 , 12
                                            c) 12, 24
Q101. Static_cast can be applied at _
       a) Compile time
                                     b) runtime
                                                           c) linking time
                                                                                         d) both a and b
Q102. Which inheritance type is used in the class given below?
Class A: public B: public C
```

Shriram Mantri Vidyanidhi Info Tech Academy PG DAC Data Structure Question Bank

}						
	a) multi-level	b) multiple	c) hybr	id	d) hierarchical	
Q103.	Which of the following	g operators cannot be	overloaded?			
	a) []	b) ->	c) ?:	d) *		
Q104.	Which of the following a) Vector	g STL Container will sto b) list	ore the element c) set	s in adjacent m d) map	emory locations?	
	•	,	,			
Q105.	which of the following a) It speeds up execut c) It increases the coo	ion	b) It slo	ws down execu	ution Iline without inline specifier.	
Q106.	Which of the following a) Static function	g is not a member of c b) friend func		c) constructor	d) virtual function	
	In which operator ove a) Post increment / de c) Both the above	<u> </u>	b) Pre i		as an argument? crement operator	
Q108.	2108. Which of the following is correct statement regarding abstract class? a) Abstract class object can't be created b) Pointer to abstract class can be created c) Reference to abstract class can be created d) All of the above					
Q109.	During inheritance wh	ich of the following is	not inherited?			
ā	a) Friend function	b) Constructo	or c) Over	loaded = opera	tor d) All of the above	
	What is the output of nyclass	the following program	1?			
	public:					
} ;	static int cour	iter;				
void m	nain()					
{	cout< <myclass::coun< td=""><td>ter:</td><td></td><td></td><td></td></myclass::coun<>	ter:				
}	·					
a) O	utput 0	b) Compilation error	c) Linki	ng error	d) Output garbage value	
Q111.	b) To hide the name of	nction to be used with of the function from th on speed of the progr	h varying types o ne linker (prever	_	symbols)	

PG DAC Data Structure Question Bank

Q112. Which of the following data structure may give overflow error, even though the current number of element in it is less than its size? a) Simple queue b) Circular queue c) Primary queue d) Stack Q113. The most appropriate matching for the following pairs: a) Bubble sort 1) O(nlog(n)) b) Insertion sort 2) O(n) c) Quick sort 3) O(n^2) a) a=1 b=2 c=3 b) a=3 b=1 c=2 d) a=2 b=3 c=1c) a=3 b=2 c=1 Q114. In a binary tree, certain null entries are replaced by special pointers which point to nodes higher in the tree for efficiency. These special pointers are called _____ b) node a) root c) branch d) thread Q115. a binary search tree whose left subtree and right subtree differ in height by at most one unit is called. d) None of the above a) AVL tree b) Red-black tree c) Lemma tree Q116. algorithm is not an example of divide and conquer rule. b) bubble sort c) merge sort a) Quick sort d) binary search Q117. Which of the following stack operations could result in stack underflow? c) is_full a) Push b) pop d) none of the above Q118. Which of the following sorting algorithm has the worst time complexity of nlog(n)? a) Heap sort b) Insertion sort c) Selection sort d) Bucket sort Q119. The number of binary trees with 3 nodes which when traversed in post order gives the sequence A, B, C is a) 3 b) 5 c) 7 d) 9 Q120. A binary tree that has n leaf nodes, all at same level. The number of non-leaf nodes in such tree is b) log(n) c) 2n d) 2n-1 a) n-1 Q121. Queue can be used to implement a) Recursion b) Breadth- first search c) Depth – first search d) None of these Q122. Which design pattern is used in Exception handling mechanism? a) Chain of responsibility b) Interpreter pattern c) Builder pattern d) Adapter pattern Q123. Which design pattern you would use to limit the class instantiation to one object? a) Factory method design pattern b) Builder design pattern c) Prototype design pattern d) Singleton design pattern Q124. The object which outlives the program execution time and exists between executions of the program is

c) transient object

known as_

a) Global object

b) persistent object

d) delegate object

Shriram Mantri Vidyanidhi Info Tech Academy PG DAC Data Structure Question Bank

Q125. Which design interface?	gn pattern you wo	uld use to trans	late an existi	ng class ir	nterface into a	compatible target	
a) Proxy design pac) Façade design p			•	-	sign pattern gn pattern

Q141.	Hashing refers to the part a) A record key from so c) A floating-point co	torage address		b) Stora d) None	~	ess from a reco	ord key	
	The inorder traversal of tree produced the sequence a) DBAECF	• •		ollowing	is a corr		raversal s	
Q143.	What is not true for ling a) It is easier to progree) It requires space for	am	ıg?	b) It ma d) All ar	-	e more collisio	n	
Q144.	In an adjacency matrix a) Similar columns	parallel edges are give b) Similar row	-	c) Not re	epresen	table d	d) None o	f the above
#inclu	A=32, B , C;		?					
-	32,32,32	b) 32 ,33 , 34	c) 32, 3	31,30	C) None of the	above	
Q146.	A dynamic data struct a) heap	ure where we can sear b) binary search tree		lesired re c) circul		· - ·		array
	We can efficiently revo	erse a string using a b) circular que	eue	(c) stack	d) doub	ly linked l	ist

PG DAC Data Structure Question Bank

Q148. Deleting a node in a linked list is a simple matter of using the delete operator to free the node's memory.

a) True	b) False			
	he sequence DEBFCA. W	=	ollowing is a cor		
Q150. What is not tru a) It is easier to c) It requires s	· -	cessing?	b) It may includ d) All are true	e more collis	ion
Q151. In an adjacency a) Similar colum	matrix parallel edges a ns b) Simila		c) Not represen	table	d) None of the above
• •		g on natural ı		s the inorder	empty binary search tree. traversal sequence of the
Q153. Two main meas a) Data and sp c) Complexity		of an algorith	b) Proce	essor and me and space	mory
a) Much more b) Much more	of the average case of a complicated to analyze simpler to analyze than more complicated and sove	than that of that of wors	worst case t case	n that of wor	st case
a) Counting m	when determining the icroseconds e number of statements	b) Cou	algorithm is mea nting the numbe nting the kilobyt	er of key oper	
a) Counting thb) Counting thc) Counting th	or when determining the e maximum memory ne e minimum memory ne e average memory need e maximum disk space i	eded by the a eded by the a led by the alg	algorithm algorithm gorithm	asured by	
Q157. Which of the fo	ollowing case does not e b) Worst case		exity theory rage case	d) Nul	Il case
O158 The running ti	me of insertion sort is				

Q159. Which of the following sorting procedure is the slowest?

b) O(log n)

c) O(n)

a) O(n log n)

d) O(n^2)

PG DAC Data Structure Question Bank

a) Quick sort

b) Merge sort

c) Bubble sort

d) Heap sort

Q160. The correct order of time comparisons is	the efficiency of the f	ollowing sort	ing algorithms ac	ccording	to their overall running
a) bubble>selection>insertionc) Merge=Quick=Heap			b) Insertion>selection>bubbled) none above		
Q161. A sort which iteratively then repeats with a new first	• • =	to exchange	the first elemen	t with an	y element less than it and
a) quick sort		b) se	election sort		
Q162. The way a card game a) Quick sort	e player arranges his c b) Insertion so	•	cks them one by c) Selection s		be compared to d) Merge sort
Q163. Which among the following	owing is the best whe	n the list is al	ready sorted		
a) Merge sort	b) Quick sort	c) Insertion	sort	d) Sele	ction sort
Q164. Which of the following a) Bubble sort	ng sorting algorithm is b) Insertion so		d-conquer type? uick sort		f above
Q165. An algorithm that ca a) Sub algorithm	lls itself directly or ind b) Recursion	•	wn as olish notation	d) Trav	ersal algorithm
Q166. Representation of da a) recursive	ata structure in memo b) abstract data type		s: orage structure		d) file structure
Q167. An ADT is defined to operations o	be a mathematical moon that model.	odel of a use	r-defined type alo	ong with	the collection of all
a) Cardinality	b) Assignmen	t c) Pr	rimitive	d) Strud	ctured
Q168. An algorithm is made algorithm is in the order of	up of two independen	t time compl	exities f (n) and g	g (n). The	en the complexities of the
a) f(n) x g(n)	b) Max (f(n),g(n))	c) M	in (f(n),g(n))		d) f(n) + g(n)
Q169. As part of the mainten in proper order, at the end or				ranging	the library books in a shelf
a) Bubble sort	b) Quick sort	•	sertion sort		d) Selection sort
Q170.The running time of me a) T(n)=2T(n/4)+n	erge sort can be recurs b) T(n)=2T(n/2		c) T(n)=2T(n/2	2)+2	d) T(n)=2T(n/3)+n
Q171.You have a sorted array array is also sorted, the best	-		nt to be placed in	that arr	ay so that the resulting

Q172. The input to a merge sort is 6,5,4,3,2,1 and the same input is applied to quick sort then which is the best algorithm in this case

a) Merge sort

a) Bubble sort

b) Quick sort

b) Selection sort

c) Cannot be decided

c) Insertion sort

d) Merge sort

PG DAC Data Structure Question Bank

Q173. The memory available for storage is less, in this case if you want to sort the data which is the better approach amongst the following

- a) Merge sort
- b) Quick sort
- c) Heap sort
- d) All

Q174. Arrange heap sort, merge sort and quick sort in the order of their space complexity

- a) heap>merge>quick
- b) quick<heap<merge c) merge>quick>heap
- d) none

Q175. One of the reason why quick sort is better compared to other sorts is

a) its running time is O(n)

b) its space complexity is theta(log n),

Q176. The running time of quick sort largely depends on

- a) arrangement of elements
- b) selection of pivot element
- c) small list,
- d) none

Q177. The running time of heapify is given by

- a) T(n) = T(2n/3) + Omega(1)
- b) T(n) = T(2n/2), T(n) = T(2n)
- c) None

Q178. Which of the following statements are right about radix sort?

- a) LSD radix sort is a stable sort
- b) MSD radix sort is a stable sort
- c) None.

Q179. LSD radix sort is applied on the following set of numbers: 21,86,124,33,29,163. What will be the order of numbers just before the MSD is considered?

- a. (21,29,86,33,124,163)
- b. (21,124,29,33,163,86)
- c. (21,29,124,163,33,86)

Q180. The worst case time and worst case space complexity of radix sort is:

- a) O(k*lg (N))
- b) O(N^2)

c) O(k*N)

Q181. The Worst case occur in linear search algorithm when

- a) Item is somewhere in the middle of the array,
- b) Item is not in the array at all
- c) Item is the last element in the array,
- d) Item is the last element in the array or is not there at all

Q182. The Average case occur in linear search algorithm

- a) When Item is somewhere in the middle of the array.
- b) When Item is not in the array at all.
- c) When Item is the last element in the array.
- d) When Item is the last element in the array or is not there at all.

Q183. Arrays are best data structures

- a) For relatively permanent collections of data
- b) for the size of the structure and the data in the structure are constantly changing
- c) for both of above situation
- d) for none of above situation

Q184. Each array declaration need not give, implicitly or explicitly, the information about

a) The name of array

b) The data type of array

c) The first data from the set to be stored

d) The index set of the array

Q185. Which of the following data structures are indexed structures?

- a) linear arrays
- b) linked lists
- c) both of above
- d) none of above

PG DAC Data Structure Question Bank

Q186. Which of the following is not the required condition for binary search algorithm?

- a) The list must be sorted, there should be the direct access to the middle element in any sub list
- b) There must be mechanism to delete and/or insert elements in list
- c) none of above

Q187.	Which	of the	following	statement	is	fal	lse î	?
-------	-------	--------	-----------	-----------	----	-----	-------	---

a) Arrays are dense lists and static data structure

Q198. What is the postfix form of the following prefix *+ab-cd

b) abc+*-

a) ab+cd-*

- b) data elements in linked list need not be stored in adjecent space in memory
- c) pointers store the next data element of a list

d) linked lists are colle	ction of the node	es that contain infor	mation part and next poin	ter
Q188. Binary search algorith a) sorted linked list		olied to ed binary trees	c) sorted linear array	d) pointer array
Q189. The extra key inserted a) End key.	d at the end of th b) Stop key.	ne array is called a, c) Sentinel.	D) Transposition	
Q190. The goal of hashing is a) O(1) time	to produce a sea b) O(n2) time	arch that takes c) O(log n) t	ime d) O(n lo	g n) time
Q191. The largest element of a) lower bound.	of an array index b) range		per bound. d) All of t	:hese.
Q192. When new data are t usually called a) underflow	o be inserted into	o a data structure, b c) house full	ut there is no available sp d) saturated	ace; this situation is
Q193. Which of the followin a) grounded header c) linked list with hea	list		b) circular header list d) none of above	
Q194. Which of the following a) FIFO lists	ng name does not b) LIFO list	relate to stacks? c) Piles	d) Push-down lis	its
Q195. A data structure whe a) Linked lists	re elements can l b) Stacks	be added or remove c) Queues	d at either end but not in d) Deque	the middle
Q196. Identify the data stru a) Input-restricted do c) Priority queues		b) Ou	ends of the list but inserti htput-restricted deque one of above	on at only one end.
Q197. Which of the followin	=	is non-linear type? c) Stacks	d) None of above	

c) ab+*cd-

d) ab+*cd-

		C Data Structu	_	on Bank		
Q199.	The situation when in a link a) underflow b) ov		is house full	d) saturate	ed	
Q200.	Linked lists are best suited a) for relatively perman b) for the size of the str c) for both of above situ d) for none of above situ	ructure and the data uation		ture are constantly	/ changing	
Q201.	In list implementation, a no a) the data	de carries informati b) the link		ink and the data		d) non above
	The link field in the last nod a) Zero value c) Pointer to the next eleme			b) link to the first i d) all above	node	
Q203.	To delete a node at the beg a) second element in the c) last element in the list	-	b) first	the list is modified element in the list d) no element		ress of the.
Q204.	A linked list in which the las a) Doubly linked list	t node points to the b) Circular list c)			everes list	
Q205.	A doubly linked list facilitate a) Any direction	es list traversal in b) Circular direct	ion	c) Either direction		d) no direction
Q206.	In the linked list representa a) the last node b) ar	tion of the stacks, they of the nodes	ne top of the c) first (•	ed by non above	
Q207.	Polynodes consists of three a) Coefficient, exponential c) Previous item link, data i	and link		b) Coefficient, data d) only exponentia		the link
	Linked list data structure us a) Computational time c) Space utilization as well a Whether a list is full or emp	s computational tin	ne.	b) Space utilization d) all above		
Q210.	a) The status operation To represent hierarchical re	=""	elements, w		e is suitable	d) zero value ?
Q211.	The depth of a complete bir	nary tree is given by		d) All of ab		
	a) Dn = n log2n	b) Dn = n log2n+:		c) Dn = log2n		d) Dn = log2n+1
UZIZ.	When inorder traversing a t a) FAEKCDBHG	b) FAEKCDHGB		c) EAFKHDCBG		cturn (DCHBG

Q213. The post order traversal of a binary tree is DEBFCA. Find out the pre order traversal

a) ABFCDE

b) ADBFEC

c) ABDECF

d) ABDCEF

PG DAC Data Structure Question Bank

	In a binary tree, certa iciency. These special	ain null entries are repl pointers are called	laced by special	pointers whic	ch point to nodes hi	gher in the tre
	a) Leaf	b) branch	c) path	d) thr	read	
Q215.	The in order traversa a) Binary trees	l of tree will yield a soi b) Binary sea		ements of tree c) Heaps	e in d) None o	f above
Q216.	If every node u in G is a) isolated	s adjacent to every oth b) complete	ner node v in G, a		d to be congly connected	
Q217.	a) Each leaf in the tr		" or at level "d–1	L"	ne left descendents	of "n" that are
Q218.	The degree of a node a) maximum two	e in a general tree can l b) two	be c) more than t	two	d) zero	
Q219.	In an ordered tree th a) oldest son	e left most son is the b) youngest son	c) left	son	d) None of the ab	oove
Q220.	An element of a tree a) node	is called a b) root		c) leaf		
Q221.	The node which gives a) ancestor	s rise to the branch no b) grandfath		c) root node		
Q222.	Going from leaves to a) traversing	the root is called b) descendin	g	c) climbing		
Q223.	A binary tree in which a) Strictly binary tree	h every non-leaf node e b) complete	• •	•	subtrees is said to b nost complete bina	
Q224.	In the inorder tree tra a) before left subtre	aversal the root is visit e visit b) in l	ed between subtre	e visits	c) before right su	btree visit
Q225.	a) no link field b) info, left, right an	resentation of binary t d father fields and the pointers to lef			le of the tree will ha	ave
Q226.	An adjacency matrix a) nodes	representation of a gra b) edges	aph cannot cont c) direction of		on of : d) parallel edges	
Q227.	In Breadth First Searca) Stack.	ch of Graph, which of t b) Queue.	he following dat c) Linked List.		used? one of the above.	

PG DAC Data Structure Question Bank

Q228. The binary tree in wh	ich the descendent po b) threaded		tor is called? c) pointer tree	
•	·			
Q229. A binary tree whose of				
a) Complete Binary Tr			b) Binary Search	
c) None of the Above	9		d) Extended Bina	ry Tree
Q230. What is the output of	the following progra	m?		
#include <iostream></iostream>				
int main()				
{				
char arr[20];				
int I;				
for(i=0;i<10;i++)				
*(arr+i)=65+I;				
*(arr+i)='\0';				
cout< <arr;< td=""><td></td><td></td><td></td><td></td></arr;<>				
return(0);				
}				
Select one:				
a) ארן (p) AB	CDEFGHIJ	c) None of the	se d)	AAAAAAAA
Q231. What is the running t for (int i=0; i<10; i++) for (int j=0; j <n; (int="" for="" j++)="" k="N-2;" k++<="" k<n+2;="" td=""><td></td><td>ode fragment?</td><td></td><td></td></n;>		ode fragment?		
cout< <in<<" "<<j<<end<="" td=""><td>AI) -) O (AIA 2)</td><td>-1\ 0 (N) N)</td><td></td><td></td></in<<">	AI) -) O (AIA 2)	-1\ 0 (N) N)		
a) O (log N) b) O (N) c) O (N^2)	d) O (N log N)		
Q232. The initial configuratineeds a minimum of? a) 2 deletions and 3 addition			ont end).To get the	
c) 3 deletions and 2 addition	15		d) 3 deletions and	d 3 additions
Q233. What is the infix vers	ion of the following p	ostfix expression?	° X12+z17Y +42*/	+
a) x+12+z/ (17+y)*42			b) x+12+z ((17+y)	
c) x+12+z/17+y*42			d) x+12+z)/ (17+Y	* 42)
Q234. Linked lists are not us	sed in:			
a) Linker	b) OS	c) None of the	se d)	Compiler
Q235. The balance factor fo	r an AVI tree are:			
a) 0, 1, or -1	b) All of these	c) 1, 2 or 3	d) 0, 1 or	2

Q236. Suppose we have the following class whose underlying data structure is a linked list of of List nodes.

```
class List{
public:
//other public functions
~List();
private:
struct Listnode{
int item;
List node *next;
};
ListNode*head;
};
Q237. Which of the following sequence of code could be used in the destructor~List () to correctly delete all of the
nodes in the list? (Which ones are legal, even if the style is atrocious?)
I. for(ListNode*n=head;head!=NULL;head=n){
n=head->next;
delete head;
}
II. for (ListNode *n=head;n!=NULL;n->next){
delete n;
}
III. ListNode*n;
Q238. while(head!=NULL){
n=head->next;
delete head;
head=n;
a) I and II only
                              b) III only
                                                    c) II and III only
                                                                                   d) and III only
Q239. Find the output of the following program?
Main ()
int x=20, y=35;
x=y+++x;
cout<<x<<y;
                      b) 55, 90
                                             c) 57, 94
                                                                    d) 57, 92
a) 56, 91
Q240. The numbers of swapping needed to sort the numbers 25,23,21,22,24 in ascending order using bubble sort
is:
       a) 12
                              b) 20
                                             c) 6
                                                            d) 13
```

PG DAC Data Structure Question Bank Q241. What is the expected time required to search for a value in a binary search tree containing n nodes? (You should make reasonable assumptions about the structure of the tree.) a) O(log n) b) O(n) c) O(1) d) O(n log n) Q242. The inorder and preorder traversal of a binary tree are a b c a f c e g and a b d e c f g, Respectively. The postorder traversal of the binary tree is: a) debfgca b) edbgfca c) edbfca d) defbca Q243. Which one is not a type of a queue: a) Non-liner Queue b) Circular queue c) Deque d) Priority Queue Q244. Consider the following C declaration struct{ short s[5] union{ float y; long z; }u; }t: Q245. Assume the objects of type short, float and long occupy 2 byte, 4 byte and 8 byte respectively. The memory requirement for variable t ignoring alignment considerations is a) 14 byte b) 22 byte d) 10byte c) 18byte Q246. In a complete binary tree of 'n' levels, there are: a) 2n-1leaves and 2n non-leaf nodes b) 2ⁿ leaves and 2ⁿ-1 non-leaf nodes d) 2ⁿ-1leaves and 2ⁿ non-leaf nodes c) n^2leaves and n^2-1 non-leaf nodes Q247. Which is not a sorting technique: a) Merge sort b) Radix sort c) Quick sort d) Poll sort Q248. The way a card game player arranges his cards as he picks them up one by one, is an example of a) insertion sort b) merge sort d) bubble sort c) selection sort Q249. Which one is the simplest data structure: b) Tree a) Strut c) Linked List d) Array Q250. A class template in C++ has the following structure template < class T > class TemplatedClass { **}**; Q251. What is the meaning of T in the above program? a) It must be an integer constant c) It is a string variable b) It is a placeholder for a type name d) It is a placeholder for a pointer value

Q252. In double order traversal:

- a) Every node is visited once
- a) Every fload is visited offer

- b) Only root node is visited twice
- c) Some node are visited twice d) Every node is visited twice

```
Q253. What is the output of the following?
#include<iostream>
using namespace std;
int main ()
 int i;
 char*art [] = {"C","C++","JAVA","VBA"};
char *(*ptr)[4] = &arr;
char<<++ (*ptr) [2];
 return 0;
}
                                                                  d) compile time error
a) Java
                      b) C++
                                            c) ava
Q254. In recursion which data structure is used:
       a) Tree
                             b) Linked List
                                                           c) Array
                                                                                 d) Stack
Q256. Which of the following operators cannot be overloaded?
                             b) ->
       a) =
                                                   c) ::
                                                                          d) ==
Q257. The postfix equivalent of the infix 4 $2*3-3+8/4(1+1)is
       a) 42$3*3-8/411+/+
                                                   b) 42$3*3-84/11+/+
       c) 42$33*-84/11+/+
                                                   d) 42$3*3-84/11++/
```
