Frame work

- 1) Choose right option ('s) below statements about the .NET CLR?
- 1. Common Language Runtime provides a language-neutral development and execution environment.
- 2. Common Language Runtime ensures that an application would not be able to access memory that it is not authorized to access.
- 3. Common Language Runtime provides services to run managed applications.
- 4. Common Language Runtime The resources are garbage collected.
- 5. Common Language Runtime provides services to run "unmanaged" applications.
- a. Only 1 and 2
- b. Only 1, 2 and 4
- c. **1, 2, 3, 4**
- d. Only 4 and 5

- 2) What is true about Managed Code (MC)?
- a. Managed code(MC) is compiled by the JIT(Just In Time) compilers
- b. Managed code(MC) where resources are Garbage Collected(GC)
- c. Managed code (MC) runs on top of Windows OS.
- d. Managed code (MC) written to target the services of the Common Language Runtime (CLR).

b. Set of class libraries

d. None of above

PG DAC Aug 19 Microsoft .NET Question Bank

3) Dot Net Framework consists of: a. Common language runtime

c. Common language runtime and set of class libraries

4) Which of the following statements are correct about JIT?

2. The code compiler by the JIT compiler runs under CLR.

1. JIT compiler compiles instructions into machine code at run time.

3. The instructions compiled by JIT compilers are written in native code.

a. 1, 2, 3	b. 2, 4	c. 3, 4	d. 1, 2	rmediate L	anguage (IL) code	
5) Which of the fo a. System.Type	_	oot of the .NE em. Parent		em.Base	d. System. O	bject
6) Code that targe a. unmanaged	ets the Common b. Distributed	ı Language Ru	intime is known a c. Native Code		d. Managed	Code
7) Which of the fo	ment for develo	pping, buildin			Desktop Applicat	ions, Web
Applications anb. It is an environnc. It is an environnd. It is an environn	nent for develo nent for develo	ping, building ping, building	, deploying and e	executing D	Distributed Applica	
8) How many type a. 4	es of JIT compile b. 2	rs available u c. 1	nder CLR?	d.3		
9) Which of the fo a. Managed code i b. Managed code i c. Managed code i d. All of above	is the code that is the code whe	is compiled bere resources	y the JIT compile are Garbage Colle	ers.		
10) Name Type of a. Private, shared	•	b. Public,	protected assem	bly	c. All the above	d. None
11) In Shared Asse a. True		ject will have alse	local copy			
12) In Private Asse a. True		ject will have alse	local copy			
13) For shared Ass a. True		e to generate alse	Strong name			
14) Strong Name i a. only name of th c. culture identity,	e .net assembly	•	b. only ver d. all the a		er,

5) What is th (CLS)?	e relationship betw	een Common ⁻	Гуре System	(CTS) and Common Lan	guage Specification	

- a. NET Languages each offer a subset of the CTS and a superset of the CLS.
- b. NET Languages each offer a superset of the CTS and a subset of the CLS.
- c. NET Languages each offer either the CTS set or the CLS set.
- d. NET Languages all offer the same superset of the CTS.

PG DAC Aug 19 Microsoft .NET Question Bank

- 6) Where is the Class Loader located?
- a. In the Common Language Runtime's (CLR) Virtual Execution Engine
- b. In the .NET source code compiler
- c. In the Portable Executable File
- d. In the host operating system
- e. In the Global Assembly Cache (GAC)
- 7) Which one of the following creates the metadata tables contained in a PE file?
- a. Source code compiler
- b. JIT Compiler
- c. Class Loader

d. Verifier

- 8) Which one of the following describes the Application Base property?
- a. Source code compiler
- **b. JIT Compiler**
- c. Class Loader
- d. Verifier
- 9) Which one of the following statements is true about MSIL code?
- a. It is source code-specific.
- b. It is architecture-specific.
- c. It is compiled to native code by JIT compilers.
- d. It is only stored in assembly resource files.
- e. It is only found in static assemblies.
- 10) Which one of the following statements is true regarding how the .NET Framework minimizes "DLL Hell"?
- a. It enforces that only one component of a given name can run on a machine at a time.
- b. It only allows multiple versions of a given component to run on a machine at a time if they all are private assemblies.
- c. It allows side-by-side execution on the same machine, at the same time, or even the same process, of any version of the same shared DLL.
- d. It registers all assemblies with the COM+ catalog.
- e. It registers all assemblies with the Global Assembly Cache (GA
- 11) _____ is collection of reusable classes or type.
- a. Base Class Library
- b. File Library
- c. Both a and b are true
- d. None of the above
- 12) The common language runtime can be thought of as the environment that manages code execution. It provides core services, such as _______
- a. code compilation

b. memory allocation

c. thread management, and garbage collection

- d. All of the Above
- 13) The .NET Framework is designed for cross-language compatibility, which means, simply, that .NET components can interact with each other no matter what supported language they were written in originally.
- a. This level of cross-language compatibility is possible because of the common language runtime.
- b. This level of cross-language compatibility is possible because of the common Type System
- c. This level of cross-language compatibility is possible because of the Common Language Specification
- d. d. None of the above
- 14) Statement A: The Common Language Specification (CLS) defines the minimum
- A. standards to which .NET language compilers must conform. Statement B: CLS ensures that any source
- B. code successfully compiled by a .NET compiler can interoperate with the .NET Fram
- a. Statement A is True

- b. Statement B is true
- c. Both Statements are True
- d. None of the above

PG DAC Aug 19 Microsoft .NET Question Bank

C# Basic

1) How a. 8	many Bytes a	re stored by 'Long b. 4	' Datatype in C# .n c. 2	d. 1	
•	ect Declaration = 32, b = 40.6	n of Values to vari ; b. int a =	ables 'a' and 'b'? 42; b = 40;	c. int a = 32; int b = 40;	d. int a = b = 42;
a. long	nge the follow g < short < int < rt < sbyte < int	< sbyte	l	nagnitude sbyte, short, long, ir b. sbyte < short < int < long d. short < int < sbyte < long	nt.
of a pr	ogram?	·	_	simple number like 35 to imp	rove execution speed
a. sbyt	е	b. short	c. int	d. long	
1) Int3	2.Parse () is on	lly used for strings sed for datatypes a	and throws argunand returns directly	'Int32.Parse ()' is efficient? nent exception for null string y '0' for null string one of the mentioned	
6) Wha		'Char' datatype? 12 bit	c. 16 bit	d. 20 bit	
1. 2. 3. 4. 5. 6.	static void Ma { int a = 5; int b = 10; int c; Console.Write Console.Read	• • •			
a. 11, 1	10	b. 16, 10	c. 16, 11	d. 15, 11	
			Stur	ct	
1. 2. 3. 4. 5. 6.	struct book { private String private int pa private Single } book b = new	name; ges; price;		out the C#.NET code given	below?
2 NOW	I STRUCTURA CON	no innorited from	STRUCT DOOK		

b. When the program terminates, variable b will get garbage collected

d. When the program terminates, variable b will get garbage collected

c. The structure variable 'b' will be created on the stack

PG DAC Aug 19 Microsoft .NET Question Bank

- 2) Choose the correct statement about structures in C#.NET?
- a. Structures can be declared within a procedure
- b. Structures can implement an interface but they cannot inherit from another structure
- c. Structure members cannot be declared as private
- d. a structure can be empty
- 3) When does a structure variable get destroyed?
- a. When no reference refers to it, it will get garbage collected
- b. Depends on whether it is created using new or without new operator
- c. As variable goes out of the scope
- d. Depends on either we free its memory using free() or delete()

Polymorphisms

- 1) The capability of an object in Csharp to take number of different forms and hence display behaviour as according is known as:
- a. Encapsulation
- b. Polymorphism
- c. Abstraction
- d. None of the mentioned

Inheritance

- 1) Which procedure among the following should be used to implement a 'Is a' or a 'Kind of' relationship between two entities?
- a. Polymorphism

b. Inheritance

- c. Templates
- 2) In Inheritance concept, which of the following members of base class are accessible to derived class members?
- a. Static

- b. protected
- c. private

- d. shared
- 3) which form of inheritance is not supported directly by C# .NET?
- a. Multiple inheritance

b. Multilevel inheritance

c. Single inheritance

- d. Hierarchical inheritance
- 5) If no access modifier for a member of a class is specified, then class member accessibility is defined as?
- a. Public
- b. protected
- c. private

d. internal

```
6) using System;
  class shape
{
 public int H;
                   public int W;
                                      public shape(int h, int w)
\{ H = h;
       W = w;
    public double area()
    { return 0; }
    class rectangle :shape
    { public rectangle(int p, int q) : base(p, q) { }
                                                        public double area()
      { return H * W;
    }
  class triangle:shape
  { public triangle(int p, int q) : base(p, q) { }
                                                     public double
             { return (H * W)/2.0;
area()
                                       }
```

```
}
  class Program
  { static void Main(string[] args)
    { shape s1 = new triangle(5, 5);
Console.WriteLine (s1.area());
                                     shape s2 = new rectangle
             Console.WriteLine(s2.area());
(5, 5);
      Console.ReadLine ();
  }
What will be the output
                   b. 25,12
a. 0, 0
                                                 c. 12.00
                                                                        d. None
7) using System; class shape { public
    int H;
              public int W;
        public shape(int h, int w)
           H = h;
          W = w; }
                          public virtual double
    area()

                      b) 0 2
                                                    c) 8 10
                                                                                  d) 78
6) What will be the output for the set of code?

    static void Main(string[] args)

   2. {
   3. int i = 5;
   4. int j = 6;
   5. add(refi);
   6. add(6);
   7. Console.WriteLine(i);
   Console.ReadLine();
   10. static void add(ref int x)
   11. {
   12. x = x * x;
   13. }
   14. static void add(int x)
   16. Console.WriteLine(x * x * x);
   17. }
a) Compile time error
                              b) 25 0
                                                    c) 216 0
                                                                                          d) 216 25
                                              Over rider
4) What will be the output for the given set of code?
class A
{
  public virtual void display()
     Console.WriteLine("A");
1) Which keyword is used to declare a base class method while performing overriding of base class methods?
a) This
                   b) virtual
                                          c) override
                                                                        d) extend
2. The process of defining a method in subclass having same name & type signature as a method in its superclass
is known as?
a) Method overloading
                                  b) Method overriding
                                                                        c) none of the mentioned
3) Which of the given modifiers can be used to prevent Method overriding?
                   b) Constant
a) Static
                                                 c) Sealed
                                                                               d) final
}
class B: A
  public override void display()
    Console.WriteLine(" B ");
  }
class Program
```

```
{
    static void Main(string[] args)
  A obj1 = new A();
  B obj2 = new B();
      Ar;
  r = obj1;
      r.display();
  r = obj2;
      r.display();
      Console.ReadLine();
    }
  }
  a) A, A
                                 b) B, B
                                                        c) Compile time error
                                                                                              d) A, B
5) The modifier used to hide the base class methods is?
                             b) New
a) Virtual
                                                    c) Override
                                                                          d) Sealed
  6) What will be the output for the given set of code?
  {
     public void fun()
       Console.WriteLine("base method");
  }
  class b: a
     public new void fun()
       Console.WriteLine(" derived method ");
  class Program
     static void Main(string[] args)
       b k = new b();
  k.fun();
       Console.ReadLine();
     }
                                                     b) derived method
  a) base method
  c) Code runs successfully prints nothing
                                                     d) Compile time error
  7) What will be the output for the given set of code?
  class A
     public virtual void display()
     {
```

PG DAC Aug 19 Microsoft .NET Question Bank

```
Console.WriteLine("A");
  }
}
class B: A
  public override void display()
    Console.WriteLine(" B ");
class Program
{
  static void Main(string[] args)
A obj1 = new A();
B obj2 = new B();
    Ar;
r = obj1;
    r.display();
r = obj2;
    r.display();
    Console.ReadLine();
  }
}
                       b) B, B
                                               c) Compile time error
                                                                                       d) A, B
a) A, A
```

Constructor Overloading

```
1) What will be the output of the given set of code?
```

```
1. class maths
2. {
3. public int length;
4. public int breadth;
5. public maths(int x, int y)
6. {
7. length = x;
8. breadth = y;
Console.WriteLine(x + y);
11. public maths(double x, int y)
12. {
13. length = (int)x;
14. breadth = y;
15. Console.WriteLine(x * y);
16. }
17.}
18. class Program
19. {
20. static void Main(string[] args)
21. {
22. maths m = new maths(20, 40);
```

PG DAC Aug 19 Microsoft .NET Question Bank

```
23. maths k = new maths(12.0, 12);
   24. Console.ReadLine();
   25. }
   26. }
a) 60, 24
                      b) 60, 0
                                                    c) 60, 144
                                                                                  d) 60, 144.0
2) What will be the output of the given set of code?
   1. class maths
   2. {
   3. public int length;
   4. public int breadth;
   5. public maths(int x)
   6. {
   7. length = x + 1;
   8. }
   9. public maths(int x, int y)
   11. length = x + 2;
   12. }
   13. }
   14. class Program
   16. static void Main(string[] args)
   17. {
   18. maths m = new maths(6);
   19. maths k = new maths(6, 2);
   20. Console.WriteLine(m.length);
   21. Console.WriteLine(k.length);
   22. Console.ReadLine();
   23. }
   24. }
a) 8, 8
                              b) 0, 2
                                                    c) 8, 10
                                                                                  d) 7, 8
3) What will be the output of the given set of code?
   1. class maths
   2. {
   3. int i;
   4. public maths(int x)
   5. {
   6. i = x;
   7. Console.WriteLine("hello:");
   8. }
   9. }
   10. class maths1: maths
   12. public maths1(int x):base(x)
   14. Console.WriteLine("bye");
   15. }
```

16.}

PG DAC Aug 19 Microsoft .NET Question Bank

```
17. class Program
18. {
19. static void Main(string[] args) 20. {
21. maths1 k = new maths1(12);
22. Console.ReadLine();
23. }
24. }
a) hello bye
b) 12 hello
c) bye 12
d) Compile time error
```

Property getset

- 1) Select the correct statement about properties of read and write in C#.NET?
- a) A property can simultaneously be read or write only
- b) A property can be either read only or write only

```
c) A write only property will only have get accessor
d) A read only property will only have set accessor
2) What will be the output of the following snippet of code?
1. class number
2. {
3. int length = 50;
 4. public int number1
 5. {
 6. get
  7. {
  8. return length;
    9. }
    10. set
    11. {
    12. length = value;
    13. } 14. }
    15. }
    16. class Program
    17. {
    18. public static void Main(string[] args)
    20. number p = new number();
    21. p.number1 = p.number1 + 40;
    22. int k = p.number1 * 3 / 9;
    23. Console.WriteLine(k);
    24. Console.ReadLine();
    25. }
    26. }
```

c) 30

3) What will be the output of the following snippet of code?

b) 180

```
1. class number
```

2. {

a) 0

- 3. int length = 60;
- 4. public int number1
- 5. {

d) Compile time error

```
6. get
   7. {
   8. return length;
   9. }
   10.}
   11. }
   12. class Program
   14. public static void Main(string[] args)
   16. number p = new number();
   17. int l;
   18. I = p.number1 + 40;
   19. int k = 1 * 3 / 4;
   20. Console.WriteLine(k);
   21. Console.ReadLine();
   22. }
   23. }
a) 30
                             b) 75
                                                           c) 80
                                                                                         d) 0
4) What will be the output of following snippet of code?
   1. class number
   2. {
   3. private int num1;
   4. private int num2;
   5. public int anumber
   6. { get
   7. {
               return num1;
                                 }
   8. set
   9. {
               num1 = value;
   10. }
   11. public int anumber1
   12. {
   13. get
   14. {
           return num2;
                              }
   15. set
   16. { num2 = value;
                             }
   17.}
   18. }
   19. class Program
   20. {
   21. public static void Main(string[] args)
   23. number p = new number();
   24. p.anumber = 20;
   25. number k = new number();
   26. k.anumber1 = 40;
   1. int m = p.anumber;
   2. int t = k.anumber1;
   3. int r = p.anumber + k.anumber1;
```

PG DAC Aug 19 Microsoft .NET Question Bank

- 4. Console.WriteLine("number = " +m);
- Console.WriteLine("number = " +t);
- Console.WriteLine("sum = " +r);
- 7. Console.ReadLine();
- 8. }
- 9. }
- a) 0 b) Compile time error
- c) 60
- d) none of the above mentioned
- 5) Consider a class maths and we had a property called as sum.b is a reference to a maths object and we want the statement b.sum = 10 to fail.Which of the following is the correct solution to ensure this functionality?
- a) Declare sum property with both get and set accessors
- b) Declare sum property with only get accessor
- c) Declare sum property with get, set and normal accessors
- d) None of the mentioned
- 6) Consider a class maths and we had a property called as sum. b which is the reference to a maths object and we want the statement Console. WriteLine (b.sum) to fail. Which among the following is the correct solution to ensure this functionality?
- a) Declares sum property with only get accessor
- b) Declares sum property with only set accessor
- c) Declares sum property with both set and get accessor
- d) Declares sum property with both set, get and normal accessor
- 7. Consider a class maths and we had a property called as sum.b is a reference to a maths object and we want the code below to work. Which is the correct solution to ensure this functionality? b. maths = 10; Console. WriteLine(b.maths);
- a) Declare maths property with get and set accessors
- b) Declare maths property with only get accessors
- c) Declare maths property with only set accessors
- d) Declare maths property with only get, set and normal accessors

Interface

- 1) Which statement correctly defines Interfaces in C#.NET?
- a) Interfaces cannot be inherited
- b) Interfaces consists of data static in nature and static methods
- c) Interfaces consists of only method declaration
- d) None of the mentioned
- 2) A class consists of two interfaces with each interface consisting of three methods. The class had no instance data. Which of the following indicates the correct size of object created from this class?
- a) 12 bytes

- b) 16 bytes
- c) 0 bytes

d) 24 bytes

- 3) Select the correct statement among the given statements?
- a) One class could implement only one interface
- b) Properties could be declared inside an interface
- c) Interfaces cannot be inherited
- d) None of the above mentioned
- 4) Which of the following is the correct way of implementing an interface addition by class maths?
- a) class maths : addition {}

b) class maths implements addition {}

PG DAC Aug 19 Microsoft .NET Question Bank

- c) class maths imports addition {} d) None of the mentioned
- a) True
- b) False
- c) Can't Say
- d) None of the above mentioned
- 6) Access specifiers which can be used for an interface are?

5) Does C#.NET support partial implementation of interfaces?

{ static void main(){

d) All of the mentioned

```
a) Public
                          b) Protected
                                                  c) Private
  7) using System;
  interface I1
  { void A();
  } interface I2 { void A();
  } class C: I1, I2
                                           public
  void A()
       Console.WriteLine("C.A()");
  Class entry
  { static void main(){
  C c = new C();
  11 i1 = (11)c;
  12 i2 = (12)c;
  c.A();
  I1.A();
  12.A();
  What will be the output of the program.
  A. C.A() C.A() A()
  B. c.A(); i2.A();
     i1.A();
  C.Error
  D. None
  8) using System;
  interface I1

                                                            d. none
16) deligate is derived from
    System. Deligat
    System . Multicast Delegate
c. none
d. from both
17) int invocationCount = d1.GetInvocationList().GetLength(0); the above code assume d1
variable of a type deligate
a. This method give length of method bind with deligate
b. This method give list of method
c. None
d. This method give list of parameter of method
18) readonly key are internally static
a. True
                      b. False
19) readonly key can not be used in method
a. true
                      b. False
```

20) Which statement is true

A.as operator is like a cast, if conversion not possible it will return null instead of raising exception

PG DAC Aug 19 Microsoft .NET Question Bank

B as operator is like a cast, a. only A b. only	if conversion not possible it wi B c. both true	II raise exception d. both false	
a. Only A D. Only	c. both true	d. both faise	
21) Array.Sort() method use			
a. Quicksort algorithm.	b. Heapsort algorith		
c. insertion sort algorithm.	d. all three depend on	size of data	
22) as operator perform of	nly conversion		
,	a. reference conver	sion	b. nullable
	c. boxing conversion	า	d. all the above
	Assembly C	`oll Basic	
1) Name Type of accombly	•	on Basic	
1) Name Type of assembly		accombly a All though	novo d Nono
a. Private ,shared assemb	b. Public ,protected	assembly c. All the al	oove d. None
2) In Shared Assembly eve	ry project will have local copy		
a. True	b. False		
3) In Private Assembly eve	ry project will have local copy		
a. True	b. False		
4) For shared Assembly yo	u have to generate Strong nam	ne	
a. true	b. False		
5) Strong Name includes th	ne		
a. only name of the .net		lly version number,	
c. culture identity, and	• •	d. all the above	
,,	, and the same of		
6) Shared Assemblies are i	nstalled at:		
a. System Assembly Cache	b. Global As	sembly Cache	
c. Machine Assembly Cach	e d. Windows	Assembly Cache	
7) To croate a key nair com	amand is		
7) To create a key pair com a. sn –k b. sr		d. none	
a. 311 – k D. 31	1-K C. 113 -K	u. none	
8) Command to move dll fi	le in shared location		
a. gacutil/i dllfilename	b. gc c. ga	utyil/I d. none	
9) What are delegates?			
a. Value Pointer	b. Function Pointer	c. Pass By Reference	d. Pass By Value
10) Generics provide bett	er performance because they	do not result in boxing or unb	poxing penalties when
storing value types.		5	01
a. True	b. False		
11) Generics are not type	safe because they can contain	different type you specify.	
a. True	b. False	,, , , ,	
12) To help overcome the	limitations of a simple array, t		•
a. Thread class	b. Collection class	c. None d. C	Connection class
12) Callantina de	huilt to dynamically resize the	manhan an tha florer	auk au nana arra tha rra
I KI I MILLOTION CIRCOS RO	nuur ta avaamicaliv regize the	mserves on the tivias vali inco	PO OF FRIDOVA ITAMS

		MVC				
1) MVC stands for	·					
a. Model, Vision & C		b. Model, View & Controller				
c. Model, ViewData 8	& Controller	d. Model, Da	ta & Controller			
2) Which of following a. The controller red	-	uest to model.				

- b. The controller executes an incoming request.
- c. The controller controls the data.
- d. The controller render html to view.

3) The model is a	•				
a. Shape of data	b. Html cor	ntent	c. Colle	ection of data	d. Type of data.
4) Which of the follo	wing is a type of viev	v in MVC?			
a. Partial view	b. Executat	ole view	c. Data	view	d. Designer view
5) Which of the follo	wings are Action Sel	ectors?			
a. ActionName	b. NonActio	on	c. Actio	onVerbs	d. All of the above
6) Which is the defau	ılt http method for a	n action metl	hod?		
a. HttpPost	b. HttpGet	C.	HttpPut	d. Http[)elete
7) Which of the follow			d in MVC?		
a. cshtml	b. vbhtml	c. aspx		d. All of the abo	ove
8) HtmlHelper class _					
a. Generates html el c. Generates html he			Generates I		
c. Generates minine	ip ilic	u.	Generates	noder data	
9) attributes ca. DataAnnotations			MVC. DataModel	,	d UtmlUalnar
a. DataAimotations	b. Fluelit A	rı C.	Datawiouei	(d. HtmlHelper
10) Which of the follo	=				
a. Partial view	b. Html View	•	view	d. Razor	· view
11) How to transfer of a. Using model object			c. Usin	g ViewData	d. All of the above
40.7		-			
12) TempData is usef	<u> </u>				
a. Transfer data fromb. Transfer data from		er nage			
c. Transfer data from					
d. Store data permar					
13) What is action fil-	ters?				
a. Action filter execu	tes before and afte	r action meth	od execute	S.	
b. Action filter execu					
c. Action filter execu			•		
d. Action filter execu	tes parallel to action	method.			
14) Bundling allows _	·				
a. Loading of multiple			_		es in single request.
c. Loading of caching	of multiple script fil	es d.	Loading of	multiple script fi	iles in single request.
15) Which of the follo	_	ute pattern in	n MVC?		
a."/{action}/{control			· ·	ntroller}/{id}"	1. <i>1</i> .
c."{controller}/{action	on}/{id}"		d."{co	ntroller}/{action])
16) Which of the follo	-		_		
a. FilterConfig	b. RegisterRouteCo	ontig	c. Rou	iteConfig	d. MVCRoutes

17) Which of the follopecified property?	owing method	of html helper ger	nerates html contr	ol based on the	data type of
a. Html.TextBox	b. Htn	nl.Password	c. Html.Editc	or	d. Html.Display
18) Which is the best A) System.Web.Http(B) Current.Session[" C) Session["LoginID"]D) None	Context.Current LoginID"] =7;	_			
19) RedirectToAction A) 304	Permanent() M B) 302	ethod for which S C) 301	tatus code represe D) 30		E) None
20) RedirectToAction A) 304	() Method for v B) 302	vhich Status code C) 301	represents? D) 30	0	E) None
21) What is ActionRe A) It is an abstract Cl C) Both A and B	• • • • • • • • • • • • • • • • • • • •	B) It is a C D) None	oncrete Class		
22) What is ViewResu A) It is an abstract Cla C) Both A and B 23) return View() wo A) Server.Transfer() C) Both A and B	ass	D) None Net MVC C# as	Concrete Class use.Redirect()		
24) RedirectToAction A) Server.Transfer() C) Both A and B	() works like in	ASP.Net MVC C# a B) Response.Red D) None			
25) In which format of A) DataSet	lata can be retu B) Datatable	rn from XML into C) A and E		D) None	
26) Can we use view : A) Yes	state in MVC ? B) No	C) Both A	& B	D) None	
27) What Request Pro A) Top-Down	ocessing technic B) Down-Up	que follows ASP.N C) Pipelin		D) Water fall	
28) What is DRY prince A) Don't repeat your C) both a and b	•	В)	Don't revise yours	self.	
29) What is default a A) Standard User		n Internet Informa ninistrator	tion Services (IIS)? C) Anonymo		D) None
30) What is the exter	nsion of MVC vi	ew when using C#	?		

PG DAC Aug 19 Microsoft .NET Question Bank

A) cshtml	B) vbhtml	(C) None	D) Both A & B	
31) What is the extens A) cshtml	sion of MVC view whe B) vbhtml	=	C) None	D) Both A & B	
32) How can you coming A) *@ Comment me *C) @* Comment me @	· @	ax? B) @* Comme n D) *@ Commen			
33) Which Namespace A) System.Web.Razor C) Both A & B		•	.Mvc.WebFormViev	vEngine	
34) Which Namespace A) System.Web.Razor C) Both A & B		_	.Mvc.WebFormVie	wEngine

PG DAC Aug 19 Microsoft .NET Question Bank

- 15. Both classes and interfaces represent a grouping of functionality and, therefore, both can be used to define a WCF service contract. However, it is recommended that you use interfaces because they directly model service contracts. Without an implementation, interfaces do no more than define a grouping of methods with certain signatures. Which of the following is a benefit of using interfaces to define Service Contracts?
- A. Service contract interfaces can extend any number of other service contract interfaces.
- B. You can modify the implementation of a service contract by changing the interface implementation, while the service contract remains the same
- C. A single class can implement any number of service contracts by implementing those service contract interfaces.
- D. All of these
- 16. You have created a new class which will be the basis for a Service Contract. You have used ServiceContractAttribute and OperationContractAttribute to decorate the class and the methods. Which of the following is NOT an advantage of using classes instead of interfaces for Service Contracts?

A. Speed

B. All of these are disadvantages

C. Simplicity

D. Multiple Inheritance

- 17. Which of the following is TRUE regarding service operations and references to objects?
- A. Objects must be serializable

B. You can't return values from service operations

C. Objects are passed as references

- D. You can't pass parameters to service operations
- 18. You've created a new class and decorated it with the DataContractAttribute so that it forms a Data Contract for WCF. This class contains several attributes that you want to make available as part of the Data Contract. Currently these attributes are declared as private. What do you need to do to ensure these attributes are serializable?
- A. Add the DataMemberAttribute and change the type to public
- B. Add the DataContractAttribute to the attribute
- C. Change the type to internal
- D. Add the DataMemberAttribute or change the type to public
- 19. A developer has designed a service that contains a method called TakeAction which is decorated with the following attribute:

[OperationContractAttribute(IsOneWay=true)]

Another client application will invoke the TakeAction operation and continue processing after WCF writes the message to the network. What must the developer of the TakeAction method do to ensure the client action can call this method?

A. Use object as the return type

B. Use FaultException as the return type C.

Remove all parameters from the method signature

D. Use void as the return type

20. The signature of a service operation dictates a certain underlying message exchange pattern (MEP) that can support the data transfer and the features an operation requires. You want to adopt a pattern that supports the sending and receiving of messages by both the service and client. Which patter should you choose?

A. one-way

B. none of these

C. request/reply

D. duplex

21. Study the following line of code:

OperationContext.Current.GetCallbackChannel();

The ICalendarDuplexCallback interface is defined as the CallbackContract property in the Service Contract. In which class should you use this line of code?

PG DAC Aug 19 Microsoft .NET Question Bank

A. Client B. You should never use this C. Both **D. Service**

22. A client application interacts with a new Service that calculates interest rates for the banks customers. The Service Contract contains BasicHttpBinding as the binding type in the endpoint configuration. The service contains some methods that return sensitive information such as customers names and addresses. You want to ensure that these methods are encrypted. What should you do?

- A. Set the ProtectionLevel to None in the ServiceContractAttribute
- B. Set the ProtectionLevel in the OperationContractAttribute to EncryptAndSign for each of the sensitive methods
- C. Nothing, all messages will be encrypted and signed already
- D. Set the ProtectionLevel to Sign in the ServiceContractAttribute
- 23. Which of the following is FALSE regarding the WSHttpBinding class?
- A. Provides WS-Addressing

B. Provides un-encrypted messages by default

C. Provides reliable messaging

- D. Provides transactions
- 24. In Windows Communication Foundation (WCF) applications, which of the following is FALSE regarding Sessions?
- A. Messages delivered during a session are processed in the order in which they are received
- B. They are explicitly initiated and terminated by the receiving application
- C. There is no general data store associated with a WCF session
- D. D. Sessions correlate a group of messages into a conversation
- 25. The instancing behaviour (set by using the

System.ServiceModel.ServiceBehaviorAttribute.InstanceContextMode property) controls how the InstanceContext is created in response to incoming messages. You have created a new WCF service and set the InstanceContextMode to PerCall. What is the behaviour of the InstanceContext in this mode?

- A. A new InstanceContext is created for each call
- B. A new InstanceContext is created for each channel
- C. A new InstanceContext is created for all calls
- D. A new InstanceContext is never created
- 26. When configuring a WCF service using Visual Studio, you can use either a Web.config file or an App.config file to specify the settings. The choice of the configuration file name is determined by the hosting environment you choose for the service. Where does the endpoint configuration element lie in a .NET configuration file?
- A. System.ServiceModel bindings endpoint
- B. System.ServiceModel services service endpoint
- C. System.ServiceModel endpoint
- D. System.ServiceModel behaviors behavior endpoint
- 27. The System.ServiceModel.Channels namespace contains the DeliveryFailure enumeration. DeliveryFailure specifies the possible types of delivery failure for a message read from the queue. Which of the following elements is a valid DeliveryFailure?
- A. BadSignature
- B. AccessDenied
- C. ReceiveTimeout
- D. All of these
- 28. Which class in WCF represents the unit of communication between endpoints in a distributed environment?
- A. RequestContext
- B. Message
- C. Binding

D. ChannelBase
